

Contiki ECM Secure Login

An easy way to enhance security while collaborating with suppliers

Improve the security on the Sourcing and eContracting portal for external users that want to log in. With two-step authentication in place an extra layer of security is added when logging in to the Sourcing and eContracting portal. Contiki Two-step authentication delivers industrial strength security when external users log on to your Sourcing and eContracting portal, by ensuring they provide both a username/password, and an additional randomly generated one-time code.

More and more organizations recognize the benefits of inviting their partners and suppliers to collaborate with them on certain business systems and processes. Their IT departments however see the potential threats that such access can create and are keen to find ways to support the business without placing it at risk. Protecting the passwords of users of your business platforms and doing everything possible to confirm and verify who these users are should satisfy both you and your IT department.

With two-step authentication installed on the Contiki Sourcing and eContracting portal, the risk of unauthorized access is reduced. If the wrong person tries to use another person's password he will still need the user's phone to get into his account. Sign in will require a standard password and a one-time password delivered to this phone. This type of authentication is often used on web sites for banking, insurance, email accounts and so on.

Contiki Two-Step Authentication can be set up to use SMS messages or the Google Authenticator app to deliver one-time password to the user's phone. The one-time password that will be sent or generated is unique and is only valid for a limited time.

If you select to set up the SMS solution, it will be simple for the users to use. There is no need for the users to install anything on their phone to make it work. While if the Google Authenticator app has support for users who don't have a mobile or are without mobile coverage. The users will be guided through the process of downloading the applications and configuring them the first time they log in after two-step authentication has been activated.

ABOUT EXARI

Exari delivers the most complete Enterprise Contract Lifecycle Management platform, used every day by market-leading companies to understand all aspects of their contract ecosystem worldwide. With Exari, customers can reduce contract risk and improve operating efficiency with 100% Contract Certainty™.
