

Contiki ECM Employee AD Sync

Automated employee maintenance in Contiki ECM

With the Contiki Employee Active Directory (AD) Integration, the task of creating and maintaining Contiki employees is moved out of Contiki. This frees up valuable time for Contiki administrators, lowers risk for human mistakes and increases data quality. This feature is especially useful for larger organizations who want to minimize manual work related to turnarounds and organizational changes.

With the ability to automatically create and update Contiki employees using information already available in Active Directory (AD), you will eliminate the need for manual employee data entries and/or periodic scripting; the only requirement is that your organization's AD is actively maintained.

Users added to AD will automatically be created as employees in Contiki.

Making it work for my company

The system settings in Contiki tell the AD Integration in which parts of AD to look for employees. Using this information, it looks for changes between the users in AD and the existing Contiki Employee Registry, and updates Contiki accordingly

- If a match is found, the Contiki Employee is updated if any changes to the AD User have been detected.
- If an AD user cannot be found in the Contiki Employee Registry, a new Contiki Employee is created based on the information in AD.
- If a Contiki Employee can no longer be found in AD, the Contiki Employee will be removed. If the employee also is a Contiki user, the user account will be de-activated as well.
- If there is an organization wide change of e.g. email addresses, the change will automatically be applied for all employees in the Contiki Employee Register.

ABOUT EXARI

Exari delivers the most complete Enterprise Contract Lifecycle Management platform, used every day by market-leading companies to understand all aspects of their contract ecosystem worldwide. With Exari, customers can reduce contract risk and improve operating efficiency with 100% Contract Certainty™.
