

Exari Match

Unlock hidden data within and between documents

During contract negotiations with multiple versions being reviewed and constantly marked up, trying to figure out the difference between one version and the next can be a complex and error-prone process. Is the right clause present? What was changed? Do all of my contracts contain the correct clause from my clause library?

What if you could easily compare multiple documents side-by-side to identify differences? Or instantly extract data from documents or images for future reporting and searching? What about comparing and analyzing clauses within documents versus what is stored in your clause library? The possibilities are endless.

Introducing Exari Match, a powerful document match software

Designed to help contract and policy experts do their jobs more efficiently and more accurately, Exari Match allows users to capture data within hundreds of contracts and compare and review up to 5,000 pages in one single session. Documents can be matched with other documents, searched using powerful search tools, annotated, checked and reviewed for quality and adherence against checklists. In addition, a flexible API allows for integration of Exari Match functionality into your existing Enterprise platforms and workflows. Save valuable time and more importantly, have confidence that nothing was missed.

Match

Instantly identify differences in content including additions or omissions made to any document type with Exari's sophisticated match capability.

- Quickly compare multiple documents side-by-side to identify changes made
- Percentage match result display to indicate differences by paragraph and overall document
- Compare different document types such as PDF, Microsoft Word, Excel, or other text-based documents
- View on screen or as a detailed produced report

Clause Match

Compare, understand and analyze the relationship between clauses in your document and those in the Clause library with Exari's Clause Match classification.

- Track wording differences between clauses used in documents and what is in the clause library
- Create a customized clause library and their variants
- Configurable color coded key for determining manual adjustments made to the initial results
- Optional configuration for recognizing split clauses

Robust Audit Trail

Keep a history of any analysis conducted with Exari's document creation and file management.

- Store all related documents and their analysis results with audit trail instantly into one organized PDF portfolio with automatic date and time stamp of creation
- Export and save to a variety of formats such as PDF or XML
- Reload back into Exari Match for further analysis or manipulation
